

Curriculum Vitae for Rohit K. Jangra, PhD

CURRENT POSITION (June 2017 onwards):

Research Assistant Professor
Department of Microbiology & Immunology
Albert Einstein College of Medicine
1300 Morris Park Avenue, 403 Golding Building
Bronx, New York 10461 USA
E-mail: rohit.jangra@einstein.yu.edu
Phone: 718-430-8852

EDUCATION:

1996 - 2002	Bachelor of Veterinary Science and Animal Husbandry (BVSc & AH) - (equivalent to DVM) , College of Veterinary Sciences, CCS Haryana Agricultural University, Hisar, Haryana, India
2002 - 2004	Master in Veterinary Science (MVSc) in Veterinary Virology, Division of Virology, Indian Veterinary Research Institute, Izatnagar, UP, India <u>Mentor:</u> Chakradhar Tosh, BVSc & AH, MVSc & PhD
2004 - 2010	PhD , Department of Microbiology and Immunology, The University of Texas Medical Branch at Galveston, TX <u>Mentor:</u> Stanley M. Lemon, MD

POST-GRADUATE TRAINING:

Feb 2010 – May 2012	Postdoctoral Fellow , Department of Microbiology, Mount Sinai School of Medicine, New York, NY <u>Mentor:</u> Benjamin R tenOever, PhD
June 2012 – May 2017	Postdoctoral Fellow , Department of Microbiology & Immunology, Albert Einstein College of Medicine, Bronx, NY <u>Mentor:</u> Kartik Chandran, PhD

Current Research interests:

In Kartik Chandran's lab at the Albert Einstein College of Medicine, I pioneered the development of recombinant vesicular stomatitis virus (rVSV)-based systems for multiple species of hantaviruses. Using **genome-wide genetic screens**, I revealed a profound and direct requirement of host cell membrane cholesterol for hantavirus entry and fusion of viral and host membranes (Kleinfelter*, **Jangra*** & Jae* et al [mBio 2015, *co-first authors](#)). I also unveiled a human asthma-associated gene, protocadherin-1 (PCDH1), as a 1) critical determinant of entry and infection of New World hantaviruses (NWH), 2) major contributor to in vivo

NWH pathogenicity (**Jangra***, Herbert*, Li* & Jae* et al., [Nature 2018](#), *co-first authors), and 3) a key determinant of cellular host range of NWH. In addition, I have been pursuing my own independent research projects on developing targeted mAb-based therapeutics against hantaviruses and respiratory syncytial virus (RSV); developing and characterizing rVSV-based systems for hard-to-rescue Old World hantaviruses such as Hantaan and Dobrava-Belgrade virus (Slough, Chandran† & **Jangra†**, [mBio 2019](#), †co-senior authors); developing rVSV-based systems expressing alphavirus (Chickungunya and equine encephalitis viruses) glycoproteins for isolating and characterizing therapeutic mAbs; and characterizing the entry and infection of Bombali virus, a novel ebolavirus, using the rVSV-based system.
